الاتصالات الرقمية

Computer is an electronic device used in:

- 1) Data Entry
- 2) Save Data
- 3) Process Data
- 4) Data Output

Personal computer (PC):

A computer used by one person at a time (a PC can't be used by more than one person at the same time).

The computer consists of hardware components and software components.

H/W components:

A. External Peripherlas :

1. Monitor: work with LCD technology (Liquid Crystal Display).
2. Keyboard: Enter letters, numbers and symbols.
3. Mouse: appeared in 1995 with Graphic user interface (GUI)
4. Speaker: Audio output device.
5. Printer: print a hard copy.
6. Camera
7. Microphone: Audio input device.

8. Scanner: Data entry device from paper copy to digital file.

B. The case & Internal Parts

Case consists of:

1. CPU (Central Process Unit)

2. Memory :

- RAM (Random Access Memory)
- ROM (Read Only Memory)
- **RAM** is the draft workspace of the CPU, Its data is lost when the electricity is cut off, However, **the ROM** data remains.

3. Motherboard: collects all parts.

C. Storage & Drivers :

1. Disks :

- 1). Floppy Disk: not available at this time. Its capacity is 1.44 MB, It is editable, and it has been replaced with flash drives.
- 2). Hard Disk: It's editable, fragmentation is necessary.
- 3). CD-ROM: Read Only Memory.

2. Drivers : it's called by letters such as :

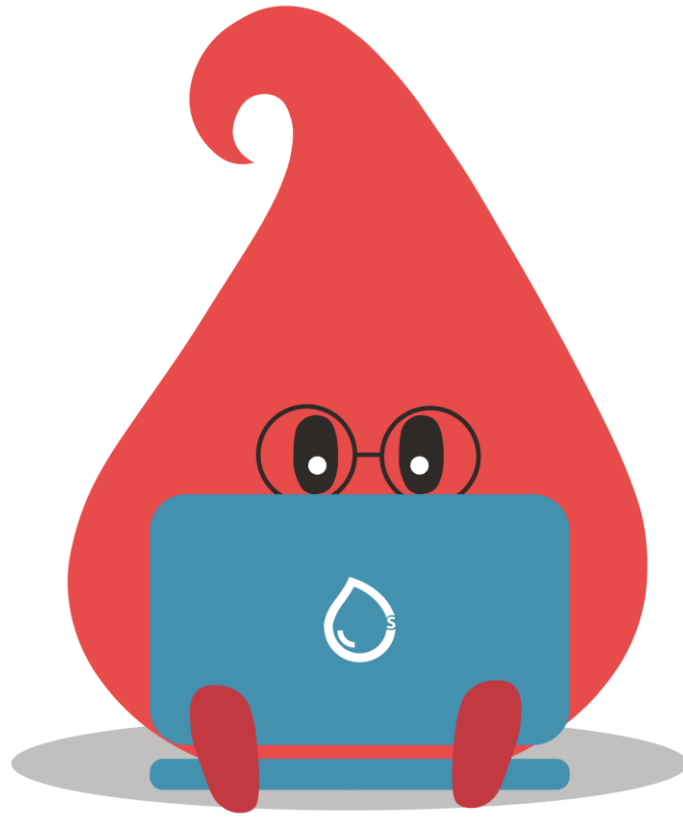

- A:, B: It's for floppy disks.
- C:, D:, E: It's for parts of hard disks .
- Note: The CPU treats the HD partition as Independent hard disk.
- F: It's for CD-ROM.

D. Power Hardware :

UPS (Uninterruptible Power Supply): works for a short period after a power outage to save data

- **Now** we can replace the word "case" with "computer" and call the remaining parts "peripherals."

Note: The case is the box in which the parts are placed.

THE END
